POST-TROPICAL CYCLONE HARVEY – East Texas
0600 ET 3 SEP 2017
 (Updates in blue)

Overview

- Post-tropical cyclone Harvey continues to weaken as it moves over the northern sections of the Mid-Atlantic. Harvey will interact with a separate low pressure system and produce as much as 1 to 2 inches of rain over the northeast U.S. during the day. Isolated flash flooding may occur, but not on a widespread area. Harvey is expected to dissipate later today as it pushes into extreme coastal Canada.
- Emergency calls have decreased.
- George Bush International Airport was scheduled to receive 63 international flights on Saturday.
- Of significantly impacted USCG facilities, 2 are not mission capable, 4 are partially mission capable, and 1 is fully mission capable.
- NPPD is monitoring a planned detonation at Arkema Chemical Plant in Crosby, TX and is drafting outage reports for the Commercial Sector to assist in their restoration and business resumption efforts.
